NHS DIABETES PREVENTION PROGRAMME:

Preventing Type 2 Diabetes in England
WHO WE ARE

• **Public Health England (PHE)** is an executive agency of the Department of Health. We protect and improve the nation's health and wellbeing, and reduce health inequalities.

• **NHS England** is an executive non-departmental public body of the Department of Health. Our mission is to secure high quality care for all, and to improve the health outcomes for people in England.

• **Diabetes UK** is the UK's leading diabetes charity. We care for, connect with and campaign on behalf of all people affected by, and at risk of, diabetes, reaching people with diabetes in local communities across the UK.
DIABETES: THE FASTEST GROWING HEALTH ISSUE

Diabetes: state of the nation

2,800,000
The number of people in England with type 2 diabetes

4 million
The number of people that could have diabetes by 2025 (Diabetes UK estimate)

1 in 10
people will have type 2 diabetes by 2034 if current trends persist

RIP
22,000
people with diabetes die early each year

Diabetes is a leading cause of preventable sight loss and is a major contributor to kidney failure, heart attack and stroke

£10bn
the approximate cost of diabetes, 10% of the NHS budget

The risk of diabetes can be reduced significantly by reducing weight and waist size

If current trends persist
70%
of people will be overweight or obese by 2034

90%
Percentage of people with diabetes that have type 2, which is largely preventable
THE IMPACT OF DIABETES

Compared to the general population, people with diabetes:

• Have twice the risk of developing a range of cardiovascular diseases
• Are 30 times more likely to have an amputation compared with the general population
• Have reduced life expectancy (an average of 6 years for someone diagnosed with Type 2 diabetes in their 50s)
THE IMPACT OF DIABETES

• Diabetes is the single most common cause of end stage renal disease requiring dialysis or transplant

• Diabetes is the second most common cause of preventable sight loss in people of working age

• Neuropathies (or nerve damage) may affect up to 50 per cent of patients with diabetes
"It took many months before I was issued with a prosthetic and in the meantime I had to cope with a wheelchair…I can tell you at 6ft 3” and pushing 20 stone it wasn’t so easy for me to get around…I spend my whole time looking at the pavement. If you encounter a bit of uneven ground your ankle will compensate but my fixed leg has no give and so if there is any slope I’ll topple over. There’s plenty of times I’ve done my Singing in The Rain impression as I grab onto a lamp post and whirl round to try and stop myself falling.

- Chris
THE IMPACT OF DIABETES COMPLICATIONS

“Everything that happened to me then was a big shock...I realised for my own safety I had to have it [the amputation] done.

When you are a young adult you need to eat properly so you don’t become diabetic in the first place. But once it happens you have to make sure you are aware of what to do and adapt.”

- Christine
DIABETES PREVENTION: THE BIG PICTURE

• Primary Prevention
  • Sugar Reduction: Evidence for Action
  • Obesity Work Plan

• Secondary Prevention
  • NHS Diabetes Prevention Programme
  • Retinopathy Screening

• Tertiary Prevention
  • The Management of Adult Diabetes services in the NHS: Progress Review
OBESITY WORK PLAN: FIVE PILLARS FOR ACTION

Where future generations live in an environment which promotes healthy weight and wellbeing as the norm, and makes it easier for people to choose healthier diets and active lifestyles.

Tackle obesity, address the inequalities associated with obesity and improve wellbeing
Percentage of newly diagnosed diabetes patients being offered or attending structured education, 2009-10 to 2012-13

In 2012-13, more newly diagnosed diabetes patients were offered or attended structured education programmes than in previous years but fewer than 4% attended the courses.

Percentage offered or attended structured education (%)

<table>
<thead>
<tr>
<th>Year</th>
<th>Offered</th>
<th>Attended</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009-10</td>
<td>7.6</td>
<td>2.0</td>
</tr>
<tr>
<td>2010-11</td>
<td>10.4</td>
<td>2.5</td>

<tr>
<td>2011-12</td>
<td>11.8</td>
<td>3.1</td>
</tr>
<tr>
<td>2012-13</td>
<td>16.4</td>
<td>3.6</td>
</tr>
</tbody>
</table>

Note
1. Due to issues with data quality, a patient may be recorded as attending structured education without this being recorded as offered to them. The scale of these issues means that the recorded percentage offered underestimates the true percentage offered by about one percentage point.

- 50.1 (2009-10) for receiving all nine care processes
- 60.2 (2012-13) for receiving all eight care processes

Note
1. From 2011-12, the National Diabetes Audit has only reported on eight of the nine care processes. The Health and Social Care Information Centre removed eye screening because it found that data for this measure was not reported consistently.

NHS DIABETES PREVENTION PROGRAMME

• Commitment of the NHS Five Year Forward View
• Joint programme between Public Health England, Diabetes UK and NHS England
• The NHS DPP aims to identify those at risk of Type 2 diabetes early and refer them into evidence-based lifestyle interventions.
• Will be available nationally on roll-out to all adults at risk of Type 2 diabetes with referral routes through:
  • Existing GP Practice registers
  • NHS Health Checks
  • Potential for opportunistic case finding
PROGRAMME DEVELOPMENT

• An Expert Reference Group has reviewed and endorsed the intervention core components

• We have also established a User Involvement Group, in order to ensure the programme takes into account the views of those at risk of Type 2 diabetes
DEMONSTRATOR SITES

We are currently working with seven demonstrator sites, to learn practical lessons from delivery. The demonstrator sites are:

- Birmingham South and Central CCG
- Bradford City CCG
- Durham County Council
- Herefordshire CCG/LA
- Medway CCG/LA
- Salford CCG/LA
- Southwark Council and CCG
EXPECTED BENEFITS: PHE EVIDENCE REVIEW

PHE commissioned an evidence review to assess the effectiveness of ‘real-world’ DPPs:

• 36 included studies
• When compared with usual care:
  – On average, 26% lower incidence of diabetes
  – Average 1.57kg weight loss
• More intensive interventions were more effective
• Following traditional DPP models (such as US / Finnish DPP) more effective
• Differential effectiveness?
  – No difference suggested for age and ethnicity
  – Potentially more effective for women and higher BMI
AN EVIDENCE BASED INTERVENTION

• The NHS DPP behavioural intervention will be underpinned by three core goals:
  • Weight loss
  • Achievement of dietary recommendations
  • Achievement of physical activity recommendations
• The intervention will be long term, made up of at least 13 sessions, spread across a minimum of 9 months.
• Set and achieve goals and make positive changes to their lifestyle.
• Sessions will be delivered predominantly in groups and will be ‘face-to-face’ unless there is a strong rationale for an alternative approach.
Non-diabetic hyperglycaemia
HbA1c 42-47mmol/mol (6.0%-6.4%)
FPG 5.5-6.9mmol/l

- Referral to DPP
  - Provider invites individual
    - Assessment by provider including
      Repeat HbA1c (or FPG) test
      Weight and height taken
      - HbA1c/FPG in NDH range
        Place on programme declined
        Signpost to NHS choices
      - HbA1c/FPG in NDH range
        Place on programme accepted
        Behavioural Intervention
          - Post-intervention assessment
            - Discharge to GP with final clinical data
              Annual review of glycaemic status, weight and CVD risk
        - Risk factor discussion including brief advice and signposting for smoking
          - Repeat blood test
            No diabetes
              - No diabetes
                - Referral to GP
              Diabetes
                - Management of Diabetes
    - Possible type 2 diabetes
      HbA1c ≥ 47mmol/mol (6.5%)
      FPG ≥ 7mmol/l
        - Repeat blood test
          No diabetes
            - No diabetes
              - Referral to GP
FIRST WAVE SITES

• We recently issued a call for expressions of interest for CCG and Local Authority partnerships.
• This will involve partnering with our contracted providers.
• We received high levels of interest from across England.
• We are starting to work with a selection of first wave sites on implementation and readiness making for national providers identified through the procurement.
• The NHS DPP will cover an area with a population of 26 million people; nearly 50% of England’s population.
NATIONAL PROCUREMENT

• A national procurement for the behavioural intervention will allow us to more rapidly roll-out and scale up the NHS DPP, maintaining fidelity to the evidence base.
• We consulted on proposed service model and procurement approach feedback through a Consultation Guide.
• A Pre-Qualification Questionnaire (PQQ) was dispatched on 18th November 2015 with the Invitation to Tender (ITT) issued in early January 2016. We will have identified up to 4 national providers on a framework by March 2016.
• Local health economies will then be supported in running local mini-competitions to identify the most suitable provider from the national framework for their area.
• Approximately 20 – 25,000 interventions will be called off from the framework in 2016/17.
TIMELINE FOR NEXT STEPS

2015/16
- Identify areas for first wave of national roll-out
- Implement and evaluate demonstrator plans, feeding learning into national programme
- National procurement of provider(s) to deliver behaviour intervention

2016/17
- Deliver between 10,000 and 30,000 interventions across CCGs identified through expression of interest exercise

2017/18
- Provide incremental scaling up of services, with a view to full coverage by 2018/19 (subject to final decisions about the pace of the programme).
KEEPING IN TOUCH

• We’re keen to involve range of stakeholders, providers and partners in developing and delivering the programme
• For more info and to sign up to our regular e-bulletin https://www.england.nhs.uk/ndpp
• For any questions email: diabetesprevention@phe.gov.uk
