

# Combating CVD through the NHS Health Check programme

Local authority - Cornwall & Isles of Scilly

## What the evidence tells us

One in ten people continue to live with CVD<sup>1</sup>. It is the second biggest cause of death in England with 200 people dying each day from a heart attack or stroke<sup>2</sup>. Every day there are over 1200 admissions to accident and emergency because of heart problems<sup>3</sup> and 290 as a result of cerebrovascular problems.

## What is the NHS Health Check programme?

The NHS Health Check is a national programme that systematically measures a range of risk factors driving the burden of CVD and other non-communicable diseases such as dementia, respiratory disease and some cancers.

## Improving CVD outcomes

National research shows that the programme is cost effective, can prevent illness and has the potential to save 250 – 500 lives each year across England<sup>4,5</sup>. It also shows that there is equitable take up of checks among high CVD risk groups and prioritising these groups is cost effective<sup>6</sup>.

### 1. Current activity, 2013 – 2018<sup>7,\*</sup>

Number of people invited for an NHS Health Check **68,869**

Number of people who have had an NHS Health Check **33,349**

Number of people still to benefit from an NHS Health Check **138,937**

### 2. Disease detection, 2013 – 2018<sup>8,\*,\*\*</sup>

Hypertension

Estimated number of people that could be diagnosed with hypertension following a NHS Health Check **4,320**

CVD risk

Estimated number of people that could be identified with a CVD risk score >20% following an NHS Health Check **21,610**

### 3. Medication, 2013 – 2018<sup>9,\*,\*\*</sup>

Estimated number of people at high risk of CVD that could be prescribed a statin following an NHS Health Check **4,170**

Estimated number of people at high risk of CVD that could be prescribed an antihypertensive following an NHS Health Check **1,900**
